Midterm Exam

Ahmed Taeha submitted Oct 27, 2022 at 11:59am

Question 42

7 / 10 pts

Does the Use Case model capture both functional and non-functional requirements -Explain your answer.

Your Answer:

Yes, but not all functional requirements are captured as use cases, the non functional requirements and functional requirements not captured by the use cases are included in the supplementary specifications. That's why the supplementary specification is an important complement to the use case model.

Special requirements is a textual description that collects all use case requirements like the non functional requirements that are not considered in the use case model.
